- Server Side Rendering

TRAINER EXPERIENCE

- Kodluyoruz Frontend Bootcamp - April 2020
- Kodluyoruz React Bootcamp - October 2019

EDUCATION

- Yıldız Technical University
Bachelor's degree in Mathematics
2011 - Present

WORK EXPERIENCE

Senior Frontend Developer

Cimri.com | September 2019 - Present

Cimri.com is a price comparison website.

We're a team of 6 frontend developers in cimri.com. In this 1 year period, I had the chance to build and maintain large-scale projects, mainly based on React.

- We built a frontend architecture for JWT based authentication.
- I built a comparison module, so users can compare multiple products in one ux-friendly screen.
- I built brochures page.
- We published a brand new backoffice webapp for internal use in cimri.
- I also lead the team especially for technical issues.

Frontend Developer

Migros Ticaret | February 2019 - September 2019

Migros Ticaret A.Ş. is one of the biggest chains of supermarkets in Turkey. I was responsible for maintaining all the e-commerce web applications containing sanalmarket.com and tazedirekt.com. We built the brand new user interface for tazedirekt.com with Angular and Rx. It is also a progressive web app. I had the chance to learn Angular deeply as a React developer, so my experience here was so enlightening.

Frontend Developer

Segmentify | July 2016 - February 2019, Istanbul - San Francisco

Segmentify is an ecommerce personalisation platform that helps online retailers to deliver unique shopping experience to their visitors. Some of the things I did there:

- Developing and maintaining the new React and Redux based user Panel.
- Developing and maintaining the Chrome Extension of the product. Using React on the frontend.
- Implementing the product features in client websites. Mostly using JavaScript, jQuery, CSS and HTML
- Maintaining the extensions of the product on ecommerce platforms (Shopify, Prestashop)
- I had the chance to work in San Francisco office for 6 months and experienced fully remote work.

Frontend Developer

Nuevo Softwarehouse | April 2015 - March 2016

Developing user interfaces for projects based on ASP.NET and Sharepoint. Using JavaScript, Angular, Jquery. CSS and HTML
